## Heavenly Blue Morning Glory

100 seeds  
110 days

Depth:  $\frac{1}{2}$ "  
Plant spacing: 12"  
Row spacing: 36"

Timing:  
Direct sow  
outdoors after the  
last spring frost.  
Or, start indoors  
2-3 weeks  
earlier, and  
transplant after  
last frost.

If transplanting, take care not to disturb the roots. Seeds take 5-14 days to germinate. To hasten, nick the seeds and soak in water for 24 hours, then sow.

Plant near a fence or wall, or provide a trellis. Morning glories will grow to 6-10' in height. Plant in full sun or partial shade. Will self sow.
